

in this day and age everything is readily available to everyone no matter where you are or what time it is. We yearn for things that emphasise our individuality, for things with sustenance. Our new Cupola collection has just that and is perfectly formed with careful attention paid to every last detail. These new favourite pieces feature fascinating coloured stones and are like a soft, warm caress for the wearer.

Just like our successful Kashmir collection, the clear design sets off the large, intensely coloured stones to great effect. The Cupola pieces have the same allure as Kashmir, yet due to their rounded shape they appear larger and are thus more present. Discover the new collection.

Ms von Wilke is already on the road with the new pieces and is looking forward to taking your call.

Best wishes from Munich,

Axel Scheffel

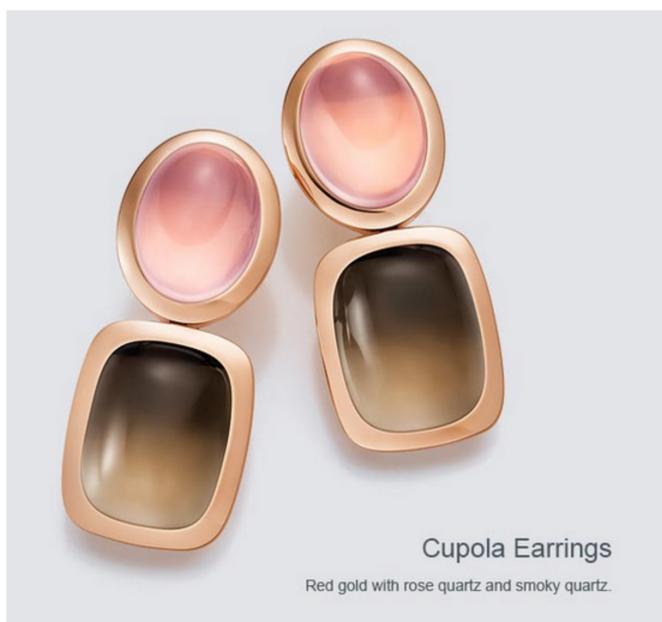

Cabochon

These harmonic pieces feature a radiance that is created by the appealing interplay of modern shapes and the cabochon cut of the stones. Smooth, feminine and both cool and chic, this is a new interpretation of the oldest type of gemstone shaping.

Traditional

The cabochon cut strengthens the stone's inherent shimmer. Our cabochons are created according to a traditional working method of raising the underside to intensify the effect of the light play.

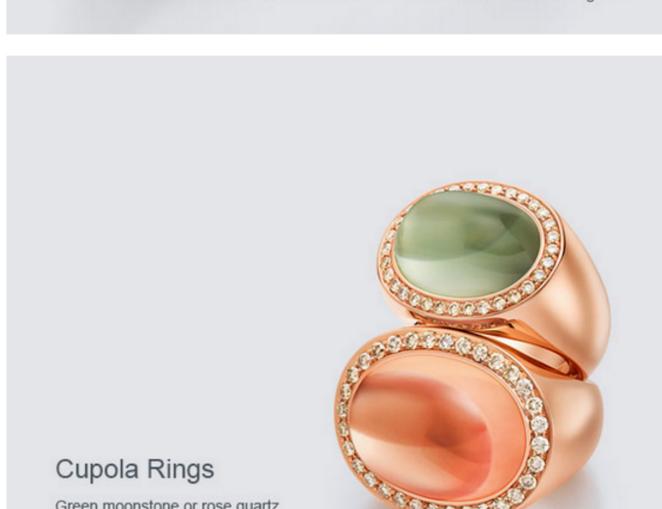

Harmony and contrast

The cabochon cut is typically an oval. With our antique, slightly angular cut stones we create more expression, variety and excitement within our collection.

Tubogas

The Tubogas bracelet is close fitting but still comfortable and lightweight on the arm. With no fastenings to fiddle with, it simply slips onto your wrist. Combined with large cabochons it creates a casual, striking look.

Festive Companions

The stones assimilate the warm gold tone of the setting and evenly reflect the light over the sublime surface as you move. Diamonds add an additional touch of glamour to the collection. These are truly unique companions for the festive season.

Find out for yourself and experience the new Cupola collection. You will be amazed.
